Summary

Mechanical engineer with 2+ years of NPD and early concept innovation experience, identifying unmet consumer needs and turning field research into compelling concepts and manufacturable products.

Education

MS	Northwestern University , Engineering Design Innovation	Aug 2025 – March 2027
BS	University of Notre Dame , Mechanical Engineering	2019 – 2023

Experience

Klein Tools , Product Design Intern	Lincolnshire, IL June 2026 – Present
- Conducted and synthesized primary field research with outdoor tradespeople and online secondary research to surface latent vs. stated needs around jobsite food/beverage storage, using affinity mapping and Jobs-to-be-Done analysis. - Led internal brainstorming sessions to translate cross-interview insights into three differentiated concept directions, generating and visualizing diverged feature sets for each to stress-test distinct user priorities. - Collaborated with Industrial Design to sketch and present concept materials to internal stakeholders, packaging research synthesis and design rationale into polished deliverables to align cross-functional peers on direction.	
Clippard , New Product Development Engineer	Cincinnati, OH 2023 – 2025
- Designed and released a new valve for a cell and gene therapy client, iterating through internal usability testing to meet user needs around fastening, cleanliness, and organization. - Resolved a critical failure for a custom valve in an at-home hemodialysis machine through root-cause analysis and close collaboration with the client's engineering team, bringing the beta failure rate to 0%. - Designed and validated an oxygen mixing blender for a neonatal ventilator, delivering a fully functional beta unit in 3 months.	
Northwestern , Needfinding in Medical Environments	Chicago, IL April 2026 – June 2026
- Conducted clinical observations and stakeholder interviews across a Northwestern GI endoscopy clinic, including physicians, PAs, and nurses, to surface unmet needs in Barrett's Esophagus screening workflows. - Synthesized findings into journey maps and opportunity frameworks, developing "How Might We" statements to prioritize actionable design opportunities across patient, clinical, and regulatory constraints.	
Northwestern , P&G Sponsored Capstone Project	Chicago, IL Sept 2025 – Dec 2025
- Led a multidisciplinary team of 5 through a full HCD process, from in-home and central-site consumer research to a fully functioning physical prototype. - Synthesized findings from 5 consumer research sessions into design requirements that directly informed iterative prototyping, presented to P&G stakeholders.	

Skills

Technical Skills: CAD Modeling, Rapid Prototyping, 3D Printing, Manual Machining, CNC Operation, Laser Cutting, Validation Testing, Drafting & Tolerancing, Manufacturing Processes

Software: SolidWorks (CAD), Autodesk CAM, CFD, C/C++, VBA, MATLAB, LaTeX, Microsoft Office Suite

Certifications

Pneumatic Specialist , International Fluid Power Society	2024
Certified SolidWorks Associate , Mechanical Design	2021
